Timberlight Manufacturing Company

## VASE INSERTS FOR EXISTING MONUMENT VASES

### Cast-cell Acrylic

Beautiful; UV resistant; chemical resistant; weather resistant; optimal clarity

Vase inserts were designed and manufactured by Timberlight to:

♥ be permanently sealed to the top of the vase to keep out water and debris thus increasing the life of the vase

♥ hold Timberlight's interchangeable click-lock flower arrangements

♥ fit most vases on monuments, on flat memorials

♥ have a nameplate to enhance security

♥ be part of a system that addresses cemetery ground maintenance issues and family's missing flowers

**Measure inside diameter of your vase to determine size of vase insert**

### BENCH WITH VASE

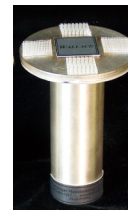

Timberlight vase insert and Click-Lock Interchangeable Flowers™

### Stainless Steel

Our biggest seller

Lasts forever; permanently installed using 3M VHB™

**Nameplate** with the family name is highly suggested for center placement on the top plate of vase inserts (security). Developed by the military, photometal lasts forever. It takes about a week to get your nameplate. (shown: center nameplate and our contact information - always available if you have

problems)

**Wood:** Versatile but doesn't last like stainless steel or acrylic nor is it as expensive. We can make a wood insert in any size and finish in gray or brown tones. Wood is not recommended to be *permanently* affixed. When appropriate, "Huggems™" are screwed to the top and rests outside the lip of the vase preventing unwanted movement. Crosses and hearts are the most popular "huggems."

### Flat Ground Marker

Click-lock flowers are amazing — you'll love them!

Jodena remembers her Grandma with wood vase insert and blue flowers with solar light in a flat ground memorial vase.
